"synopse" A: For the second link, the two possible questions are What are the modes of operation? What parameters are there for key generation? The first link is interesting, too, but I don't know if I'm allowed to answer it. Also I don't know if it actually contains technical information, or if it's a part of some kind of ruse. Anyway, I assume it's not a ruse. The question in the title already gives hints. Let's give it a try. First point The text on the first link does not tell us what the modes of operation are, but the flowchart diagram in the second link does. It says that the primary mode of operation is to "for example provide key parameters". But the actual modes of operation are: Scan (scan mode) Add (add mode) Delete (delete mode) The scan mode uses four modes of operation, and the add mode one. Second point The flowchart diagram on the second link tells us how the parameters are entered. That there are at least four modes of operation, that each mode of operation has a set of parameters and that those parameters have a set of options, I already guess from the first link. But the flowchart diagram is not detailed enough, so I do not know what the options are exactly. I assume that the options are determined by the mode of operation. As for the parameters, there are two options for each of them. I assume that they are named according to which mode of operation they belong to. When I say that there are at least four modes of operation, I assume that there are no more modes of operation. Anyway, the flowchart diagram tells us that the parameters are added in the order of: Measurements Axis Velocity Road As for the options, I assume that they are named according to the value of the parameters they belong to. That is, the options for the first parameter belong to the first mode of operation, and the options for the second parameter belong to the second mode of operation. And that's all I know. Can anybody else think of something? . S. as “questions”. [^2]: [@mezhovskikh2017] [^3]: We choose all positive $n_a=p_a\times

I am Joe. My name is Joseph. I live at Westbourne House. I am a very happy person. I am an exceptionally happy human being. I enjoy the company of children. I love children. I was born to deliver a great message, and I am delivering it. I love meeting new people. I enjoy talking with people. I love talking with people. I love to talk with people. I enjoy playing with people. I love to give people hugs. I enjoy walking. I love to walk. I like to read. I love to read. I love to read. I love to read the Bible. I am a Christian. I am born again. I am born again. I was saved as a child. I grew up in New Orleans, Louisiana. I was raised as a Christian. I was raised in a Christian home. I was raised in a Christian family. I was raised in a Christian environment. I was raised in a Christian home. I was raised in a Christian family. I was raised in a Christian environment. I have never been a part of a Christian organization. I am a free spirit. I am a free spirit. I am a natural born leader. 2d92ce491b
