A: You need to download the Windows 64bit version of the MATLAB R2013a. So first you need to go to their site and download the installation file. It would be called "install_a86_bin_win64.exe" Then you need to just double click the file you have just downloaded, and go through the wizard till you finish the installation. After the installation completes, you will see MATLAB/R2013a folder in your Program Files under "Start menu". Just double click on the folder once you see the installation files, and go through the wizard. You'll need to wait for the wizard to finish as the installation usually takes a few minutes depending on how large the installation file is. Upon finish the wizard, you can start MATLAB. Your license key will be displayed on the dialog box before you launch it for the first time. If you have an earlier version of MATLAB, the license key should be displayed on the splash screen too before you launch MATLAB.

Q: Why does the array_key_exists() function not work here? I've got a query that collects products I like, the type and name of each entry is given in the array. In a few cases, the entries do not fit into one row, and some products have the same category, so entries do not appear in their respective row. I wanted to count the amount of non-duplicated products, but it seems as if the array_key_exists() function returns 'true' for even duplicates. I want to find out where I went wrong. Code:

```
$this->db->select('products.category, products.name, products.type'); $this->db->where('user_id', $user_id); $query = $this->db->get('products'); $result = $query->result_array(); I
```

then want to find out if the product is a duplicate by doing:

```
$counter = 0; foreach($result as $products) {  
if(!array_key_exists($products['category'], $products)){  
$counter++; } } A: This is what you are looking for.
```

array_key_exists checks if a key exists in an associ ba244e880a
