amateur astronomer Scott R. Sheppard of the Near Earth Object Program at the Mount Lemmon Survey in the California region of the United States. Sheppard was looking for NEOs with a perihelion (closest approach to the sun) less than 1.3 million kilometers (km) (about 860,000 miles, or 7.5 million kilometers, km), the distance from the Earth to the sun. The C/2019 Y4 comet, which is also known as ATLAS, is near the inner edge of the asteroid belt, which has an average distance from the sun of about 1.6 million km. This means that the comet was very close to the 2d92ce491b
