

---

TAMUDON.MDI.TEMENISI is the.mdi extension for the file. The first segment is the hash of the MAC address of the user. The second segment is a User-Defined Name. The third segment is the name of the file. The MDSDK.DLL has a function that can be called to change the MAC address of a user, and/or change the user-defined name of a file. Technical Details: This feature uses the API function MDSDK.DLL.ChangeUserName and MDSDK.DLL.ChangeUserNameMask which allows you to change the user-defined name of a file for one or more users. If you specify the NULL name as the name of the file, then the user-defined name of the file will be removed for that user. You can specify the NULL name to remove a user-defined name that is not present. Description of the Project Features:  
[VistaMixer]vMAPP.reg : MAPP for MACAddresses protection. Users and programs will be protected from MAC spoofing. (Preferred version is VistaMixer v.0.2.3)  
[VistaMixer]vSPORT.reg : SPORT for MACAddresses protection. Users and programs will be protected from MAC spoofing. (Preferred version is VistaMixer v.0.2.3)  
[VistaMixer]vPREM.reg : PREM for MACAddresses protection. Users and programs will be protected from MAC spoofing. (Preferred version is VistaMixer v.0.2.3)  
[VistaMixer]vHOST.reg : HOST for MACAddresses protection. Users and programs will be protected from MAC spoofing. (Preferred version is VistaMixer v.0.2.3)  
[VistaMixer]vMAX.reg : MAX for MACAddresses protection. Users and programs will be protected from MAC spoofing. (Preferred version is VistaMixer v.0.2.3)  
[VistaMixer]vMACP.reg : MACP for MACAddresses protection. Users and programs will be protected from MAC spoofing. (Preferred version is VistaMixer v.0.2.3) [V 70238732e0
