E16-treated embryos as controls in Figure 5C, the glycogen content of Cdc42E76-null embryos was significantly reduced. Therefore, accumulation of glycogen in the embryonic mesoderm is influenced by Cdc42 activity, most likely through the GSK-3 $\beta$  pathway. Interestingly, mammalian Cdc42 is thought to regulate the activity of GSK-3 $\beta$ . The glycogen content of the diaphragm of Cdc42E76-null embryos was significantly reduced as compared to that of wild type. While the diaphragm is a
